## خلاصه مقاله:

The purpose of study is to definition of contextualism concept and close approach connected to role of it in architecture and surveying all effective features of context on Kazaj village (located in the southern province of Ardabil ( by analyzing and investigating it. Research methodology in this research With regard to the topic of discussion is descriptive and area study. In the long term, sustainable design is not an option it will be an obligation because of we have destroyed the source, water and ground. In this regard, we have ignored the catastrophic results. According to this issue in the architecture, sustainability and designing related to environment is one of the essential subject in this time. Sustainable architecture expression or environment architecture is distinguished to the complex problems of coexistence nature, human, and artefacts. Nowadays environment and sustainable architecture's purpose is creation sustainable and organized balance between nature, creatures, and artificial environment. Contextualism, a trend in thinking in the later parts of 20th century, came from the desire to resolve the problems regarding harmony with the environment and the placement of new buildings within historical surroundings that was apparent throughout the postmodern period. In an architectural sense, context can be perceived as the unified completely that gives meaning to the various parts of the building. However, contextual architecture, or contextualism, can be defined as the architecture that responds to the specific physical characteristics of its site. Since, pay attention to context, texture and relation between environment with space have emphasized is original architecture characteristics Kazaj village that with understanding the message his bed has formed. The result that comes from this investigation offer that in contextualism architecture, any building design based on using of Climatic, Historical, Sociable, Physical, and Cultural aspects. Context architecture, understanding of environment and receive message from texture is important principles .of sustainable architecture

## کلمات کلیدی:
