خلاصه مقاله:

One of the important cases in stability of architecture is the designing bilding form in accordance to ecology because architecture and ecology have direct impact on eachother. In this article the causes and the factors of creating stairychitecture form in Zonuzag Villlage – it's one of the univer village in Iran's history and it has unknown because of experts carelessness in turism _ and stability in architecture as one of orginal indexes are studied. Zonuzag village is in foothills of Galae mountain and such as all stairychitecture the roof of botton home is the yard of upper home. Although the topografhy of there is mountain ons area as far as the eye can reach horizon is seen . It is upper than all mountains and hills in around of Zonuz city. The four directions of our views are endless (infinite) and only directions of eyes show this end point. This index is no available for neither of Iranian villages. (it is related to philosophical thought in Mitraism. Contained of septuplet degrees supported by seven stars to using for starsdirections and constellations in design of building stairychitecture _ village architectureelf architectures consider to effects and importance of philosophical and spiritual thought and building design arised of mathematics and philosophy and astronomy architecture stability will touch out staudingly. It should be considered that the operations of this stairychitecture form is so that in twenty-one century and the development of technology people of this village live happily with academic high-education and for then(it has no nessesarry to change building form)that is cause for thinking about effects of building areas in village on social .stability

کلمات کلیدی:

architecture and ecology _ stairychitecture form _ philosophical thought (mitraism) _ design accordance to mathematics and astronomy _ stable design _ time and place _ social stability
