خلاصه مقاله:

The present study, offers a method for analyzing matching test items. The significance of the study lies in the fact that there is no clear-cut method for analyzing the mentioned type of items. In this method, the indexes such as the optimum difficulty level, difficulty level, and confidence limit of the optimum, discrimination value, and variance can be calculated

کلمات کلیدی:

matching test items, optimum difficulty level, difficulty level, the confidence limit of the optimum, discrimination value
