## خلاصه مقاله:

Today, by widely spread of information technology (IT) usage, E-commerce security and its related legislations are very critical issue in information technology and court law. There isa consensus that security matters are the significant foundation of e-commerce, electronic consumers, and firms' privacy. While e-commerce networks need a policy for security privacy, they should be prepared for a simple consumer friendly infrastructure. Hence it is necessary to review the theoretical models for revision. In This theory review, we embody a number of former articles that cover security of e-commerce and legislation ambit at the individual level by assessing five criteria. Whether data of articles provide an effective strategy for secure-protection challenges in e-commerce and econsumers. Whether provisions clearly remedy precedents or they need to flourish? This paper focuses on analyzing the former discussion regarding e-commerce security and existence legislation toward cyber-crime activity of ecommercethe article also purports recommendation for subsequent research which is indicate that through secure factors of e-commerce we .are able to fill the vacuum of its legislation

## کلمات کلیدی:

e-commerce law, cyberspace security, e-consumer protection, jurisdiction
