خلاصه مقاله:

Nowadays, inequality between developing and underdeveloped countries has a rapid increment. Developed Countries impress the underdeveloped countries to become dependent through them. For that reason, Turkey has to increase its capability of making technological innovations. It has tried to be identified by examining the expenses of R&D in public, mercantile establishments and universities in Turkey that which expense isn't enough and which expense should be doubled. As a result, developing new resolution strategies will be easier

کلمات کلیدی:

R&D, technological innovation, competitive strength
