خلاصه مقاله:

In this article, the main theoretical views of the productive function of Kobb-Duqlas have been studied, and its characters have been evaluated in the economic of Islamic republic of Iran and republic of Azerbaijan. Likewise, the results show the effect of this function on the growth dimension production (GDP) of the country i.e. the basic capital, and the workers' potentiality. At last, this article gives some suggestions about the development of the economics of the government

کلمات کلیدی:

regression analyses, mathematical-econometric, economic growth, modern productive models, Kobb-Duglas
