## خلاصه مقاله:

The study aimed to assess management performance in regard to efficiency in selected automobile companies. In order to achieve the objective of the study four efficiency financial ratio namely Fixed Asset Turnover, Total Asset Turnover, Inventory Turnover, Return on Investment were analyzed. IBM SPSS statistics 20 was applied to analysis secondary data collected from 7 years (2007-2013) annual reports of 10 sample companies which were selected Based on Maximum Market Capitalization. The companies for this study were selected from CNX auto INDEX of Bombay stock exchange. Data analysis through average, standard deviation, regression and ANOVA test techniques concluded that, there is a significant relationship between efficiency ratio and net profit. It is inferred that there is .(significant relationship between ROI, TAT, IT and FAT (Independent variables) and net profit (Dependent variable

## کلمات کلیدی:

Fixed Asset Turnover, Total Asset Turnover, Inventory Turnover, Return on Investment, Indian Automotive Industry
