خلاصه مقاله:

This paper aims at studying the position of sustainable architecture in Iranian houses after modernism. The research methodology is based on library sources and based on case study with the population including 20 houses in Iran. Due to the important of giving sustainable approaches for solving the residing problems after modernism, such research seems necessary. The results of the study indicates that for promoting the sustainable level in Iran's architectures, there needs promoting the culture, technology, connections and improving the economic conditions. On the other hand, for compensating the available gaps in architecture, we shall approach to living style upon management of lifestyle. Therefore, management of cultural area in Iranian architectural sustainability is more important. The obtained evidences and studies in energy indicates that the easiest, most logic and most reachable .renewable energy in Iran is solar energy which provide the general mechanism for benefiting from this energy

کلمات کلیدی:

Modernism, Sustainable architecture, Neo-Regionalism, life style, climate
