## خلاصه مقاله:

International experience in the past few decades have shown that economic growth and industrial development in the global economy affect the presence of the main requirements to achieve political sovereignty, national independence and cultural prosperity. The serious implications of this strategy and the correct application of rational energy resources. Past efforts to saving and rational use of oil and gas, optimization and substitution of fossil fuels with renewable energy sources for energy, such as solar, wind and geothermal as well. Our country is also due to the geographical location of various capacities in the field of renewable energy, and this issue has caused the need for renewable energy will be on the agenda of the authorities. This essential role of renewable energy in line with the sustainable development of the areas of emphasis. Therefore, in this study the role of renewable energies in sustainable development areas of Iran

## کلمات کلیدی:

renewable energy, sustainable development, areas in Iran
