خلاصه مقاله:

Unfair distribution of bank profits, Uncertainty in the source dividends received, Interaction weaknesses between policy and administrative institutions, in the banking system in the country shows theoretical foundations of Islamic banks is different from conventional banks. Other hand by increasing importance due to environmental issues and need to make environmental thinking in banks, the fundamental challenge for banks and the main problem adopting this thinking is that it may reduce bank profits or limit its activities and lead to the discretionary loss. This descriptive analytical study, to examine the theoretical productivity of Islamic banking (with emphasis on green banking), Citing the history of literature analysis Islamic banking and realizing their productivity with an emphasis on green banking. Also, by raising the issues of green banking and necessity of attention to the environment, will generalize the results of the survey in the Green Banking. Findings suggest that lack of accurate information and transparency, Some false transactions by brokers and bank clients Ambiguity, complexity in the Islamic banking system and lack of adequate training correspondent banking, Inattention to correct some interest-free banking law regulations and operating procedures, Are some causes of the lack of full implementation of interest-free banking law. Based on the results, so, the pathology of Islamic banking system, of Various legal and administrative aspects, developmending of information and communication technologies in the banking system, reviewing of organizational structure of banks for compliance with Islamic banking system Could be a solution. Also, Pushing the attention of investing in environmental and green products, can survive the environment and saving resources and energy saving

کلمات کلیدی:
