خلاصه مقاله:

The current research is conducted with the aim to identify the critical factors affecting the optimal storage location for disaster management in the Electricity Distribution Company of Shiraz on the principles of passive defense. The research method is descriptive-analytical and correlational. The study was conducted in two phases: qualitative and quantitative. After extracting 10 main factor and 37 sub-factor affecting the optimal storage location of crisis management of literature, have been surveyed through questionnaires. The staff of Electricity Distribution of Shiraz (80 people) are the study population which are using the Morgan and simple random sampling, 69 of them were chosen. For validity test, content validity and convergent and for reliability test of measurement tool The validity of content and convergent validity and reliability of measurement instruments for measuring Cronbach's alpha was used. Data analysis was done by the statistical software SPSS, Smart PLS. The results of the tests showed that all of 10 factors, affecting the optimal storage place crisis management.

کلمات کلیدی:

optimal storage location, crisis management, passive defense
