## خلاصه مقاله:

A lot of researches show that abundance of natural resources lead to resource curse (Ayadi (2005), Esfahani(2010), Pesaran et.al(2012). Oil income is the main sources of government expenditures and import of goods and services in oil export countries like Iran. Increasing of oil prices cause of increases in government expenditure. In this paper analyze the dynamic relationship between oil incomes, government expenditure and economic growth in Iran's economy by using VECM. For this purpose annual data from 1978 to 2014 had used. The result show that oil income is main resources of government expenditure and effective on economic growth in long run but there is no any finding in short run. This is back to lagging in government expenditure effectiveness and volatile in oil price
