خلاصه مقاله:

One of the problems of developing communities that could be irreparable harm for the country to have a normal Haya crisis. Humans can not prevent an earthquake, but can be created by using a series of financial losses and methods of humanitarian disasters, and damages that may arise in the long term in front of the earthquake. The aim of this study is to evaluate emergency preparedness plans for dealing with earthquake damage and reduce the financial aspects. takes foresight and futures studies. . Even an effective planning process, including changes in the vulnerability of old and monitors changes in technology and results that ultimately these changes will improve emergency response and disaster. In line with this process is very important two categories: Emergency management objectives, structure and strategies related to severe accidents are damages defines Emergency response planning ways to collect resources and ways to control the population behavior in order to reduce the risks explained., response and recovery of funds were examined. The results showed that in particular the financial aspects needed to overcome the earthquake crisis management measures, including administrative measures before earthquake, during earthquake after earthquake.

کلمات کلیدی:
