خلاصه مقاله:

Log linear techniques were utilized to analyze the in order to identify the interactions and interrelationships underlying the categorical data on the various factors influencing personal concern for the environment in zanjan Province-Iran. To select the most parsimonious model to be fitted to the data, partial and marginal association tests and backward elimination procedures were utilized. The log linear modeling results demonstrated that a combination of interacting factors. were responsible for influencing personal concern for the environment

کلمات کلیدی:

Log linear modeling, partial association test, environmental concern
