## خلاصه مقاله:

Post-cold war international developments and changes in ruling trends like globalization and IT have led to new components. Among these changes; overlapping research fields because of merging interfering subjective areas, fading borders in scientific fields can be named theoretically. Energy has always been a big issue for States politicians in contemporary history especially for Superpowers. At the end of traditional geopolitics and emergence of Geopolitics as a direct result of growing demand for energy supplies in Asia, international's attention focused on rapid economic growth factors and oil consumption. In this regard, Middle East as the biggest supplier of oil in the world gained a promoted position in International Equations.

## کلمات کلیدی:

Oil and Foreign Policy, Geographical stability, Energy Security, International System
