خلاصه مقاله:

Development of a city is a vital procedure. In this term utilizing development plans that would prepare a sense of unity and integration in relation to the city as a whole is vital. Bazaars as a unifying element connect the main urban functions and guarantee the city economic and social life. Sustainability of bazaars in Iranian traditional cities seeks to find the solutions concerning the effect of the city development on cultural heritage and urban element of the city. The main aim of this study is to explain the differences of the sustainability role of the bazaar in the traditional Iranian city and the modern Dubai city. Accordingly the most important question of this research are as follows: What is the role of bazaar's structure to obtaining long term sustainability according to the image of citizens , How do bazaars play out their role as unifying factor (among sustainable features) in these cities The case studies are the city of Lar in south of Iran and Dubai. Methodology of this study is based on qualitative and quantitative data, first we used documentary method for collecting data, and then we had field trip and formal/informal interviews. Next, Parameters from the qualitative method obtained from case studies and review main factors in creating bazaar. Finally quantitative evaluation was used to compare bazaar sustainability in Lar and Dubai. Consequently results emphasize that bazaar provide cohesion among the different part of cities, such as residential areas as well as socio_economical ,_environmental and commercial centers
