خلاصه مقاله:

although some researchers do not have any doubl on the effectiveness of user participation in MIS success, research findings show such relationships could not be consisient in all different conditions . Present paper investigates the relation between user participation , on MIS success in light of managerial styles over systems growth stges . six product - oriented companies were elected which had a minimum condition of having 1000 employees and have been experiencing al leasl an MIS for 5 years to be a candidate . Asum of 48 managers and 55 users in MIS department were selected to answer four standard questionnaires . Results showed 1) user participation only were effected in system developoment stage, 2) there is no effect of managerial styles on user participation and systems success , 3) managerial styles , user participation and systems success differs in MIS growth stages and finally 4) the relationships .and systems success differs over MIS growth stages
