## خلاصه مقاله:

Ahmadinejad s government policy was the social housing project which provides housing for lower income groups by removing the cost of the land from the final cost of the house. This project created a zoning plan with specific social layers as well as many challenges in social and cultural issues. The purpose of this study was to investigate factors affecting on social ills and insecurities in the social housing plan of Omidiyeh city. The research method of the current study is afield survey. The population included residents of social housing projects of Omidiyeh city. The sample size was estimated 241 people through Kukran formula. The measurement Likert scale is used to check the level of insecurity and social ills. The results show that the chisquare value equals to 105/263, degrees of freedom equal to 16 and the significance level is 0.000. Average rating of insecurity and social ills based on inhabitants viewpoints is 2/52 and standard deviation equals to 1/406. This means that the residents of social housing project assessed average the .level of insecurity and social ills of Omidiyeh city

## کلمات کلیدی:
