خلاصه مقاله:

In this paper, we introduce and investigate two new subclasses of the functions class of bi-univalent functions defined in the open unit disk, which are associated with the Aghalary- Ebadian-Wang operator. We estimate the coefficients a_2 and a_3 for functions in these new subclasses. Several consequences of the result are also pointed out.

کلمات کلیدی:

Analytic functions, Bi-univalent functions, Univalent functions, Convolution operator
