## خلاصه مقاله:

Introduction: Attention to Breast Cancer prevalence age and be low age of given in Iranian society and attention to that just screening center of Breast Cancer in East Azarbajejan and Tabriz is Behbood hospital we decided to assay results of Sonography - Mamography screening tests. Method & Materials For 5000 women of clients of BC clinic of Behbood completed questioner of demographic -social characteristics and risk factors of BC by researcher. Then breast s of women were examined by midwives and recorded in questioners. If there was abnormal results, Ultra Sonography or Mammography & FNA were written and results were recorded in to questioners. Results: From 998 Sonography, 40 cases were abnormal. From 636 Mammography, 183 cases were abnormal. From 14 FNA one case was Cancer (7.1 %). Some of breastfeeding had significant relationship with abnormal Sonography. Menopause status, Dietary, use of chemical agents, and mode of use Lipids had significant relationship with abnormal Mammography ( $p < 0.05$ ). Conclusion: Attention to these results, women should be implement of Breast Cancer Screening tests more and disciplinary ,and their Knowledge about Breast Cancer & benefits of screening were . increase by public IT
