## خلاصه مقاله:

During last decades a large amount of efforts have been made by emerging economies and developing countries in order to acquire knowledge and technological capabilities of innovating and developing complex product systems (CoPS). Also, many scholars have highlighted the role of government policies in the formation and evolution of CoPS industries in different countries. In the other side, Iran has made plenty of efforts to acquire knowledge and technologies of manufacturing gas turbines and consequently it has achieved remarkable outcomes. This paper aims at identifying and categorizing government policies meantime formation and evolution of this industry in Iran, through employing qualitative approach and case study strategy. Research findings indicate that the Iran's designed and executed influential policies via acting as leader and coordinator, investor and financier, client and user, enabler and facilitator and created proper conditions for formation and evolution of this industry in Iran. Also, the dynamism of government policies during last three decades is illustrated. Our findings can suggest key policy implications for government interventions in the establishment and development of various complex product systems industries especially in developing countries.

## کلمات کلیدی:

Government Policies, Complex Product Systems, Gas Turbine Industry, Iran
