## خلاصه مقاله:

The purpose of this study was to investigate the effect of financial ratios of banks on bank performance in crisis situations. The research hypotheses were tested by using a multivariate regression model. Then, the results of the descriptive indexes of the data, the table of variables' correlation coefficient and the analytical results of testing research hypothesis were interpreted. The present research has been conducted to test the hypotheses based on a sample of 19 banks in the period from 2009 to 2014 among the banks admitted to the Tehran Stock Exchange. The results showed that the crisis situation has an intermediary effect on the relationship between the financial ratios and profitability of the bank, which are presented separately.

## کلمات کلیدی:

crisis, financial ratios, performance, profit margin, panel data
