## خلاصه مقاله:

Breast cancer is the most common type of cancer among women. Breast thermography is a very useful imaging technique for risk assessment and early detection. The feature extraction is the most critical phase of the diagnosis of breast cancer. The purpose of this study is to review and classify the features that extracted from thermal images. The features are extracted and compared with each other. This paper can be a guidance source for researchers in feature extraction field.

## کلمات کلیدی:

Breast cancer, Thermal image, Feature extraction, Feature
