خلاصه مقاله:

Iranian historical urban spaces always in direct contact with Iranian culture and worldview are shaped and environmental considerations and climate and over the time its physic is in direct contact with the audience. Only in the twentieth century and the formation of urban space in the evolution and growth process have been dramatic changes and the relationship between past and present urban space and consequently its relationship with the hearing. By discrete sense of identity and urban space, causing many contemporary crises in modern society that we find root S of these problems in the lack of operational definitions of urban space up to main criteria semantics components. This study sought to examine the components of the semantics and descriptive studies of urban space in the historical cities like Kashan as a one of many valuable urban textures in Iran geography into the Islamic perspective to understand the concepts and principles and applying them to revive the sector achieved significant component.

کلمات کلیدی:

Urban space, identity, contemporary crises, semantic components, Kashan
