## خلاصه مقاله:

Introduction and goal: Drug addiction has been recognized as one of the health, medical and social problems of the present century, which today brings human beings from physical, psychological, and social threats. Women are the primary victims of many social and social problems, including addiction. Drug, stimulant, alcohol and tobacco use are a growing problem in the world that can be seriously used during pregnancy for mothers, fetuses and newborns  
Research Methodology: Search the internet and browse authoritative reference books  
Findings: Addiction to complications such as preterm delivery, abortion, intrauterine growth restriction, low intrauterine birth / death, intrauterine growth retardation, intrauterine growth retardation, abnormalities of the limbs and nervous system, increased risk of pregnancy-induced poisoning, aggression, suspicious-irritability, and Reduce appetite and serious complications such as the risk of postpartum hemorrhage and even the death of the mother and the baby, and in addition to the economic, psychological, and social problems, the mother and the mother s mother risk and the fetus, and since life expectancy for both Child) have a close relationship with each other, the ongoing crisis (mother s addiction) of life Physical, psychological and psychological risks, and in some cases can lead to early death for the fetus  
Considering these factors, pregnancy can be a period of fear and anxiety, while the feeling of insecurity, fear of holiness and divorce and fear of future pregnancy will be unfeasible. Problems and economic concerns are also due to the disturbance of thought and anxiety, and may cause fears Its latent lies. Pregnant women are full of turbulence, as well as frequent cases of addiction in order to relieve their thoughts and anxieties, the presence of drugs in the context of the environment and the traditional background of using substances for relaxation and mental comfort  
Considering these factors, pregnancy can be a period of fear and anxiety, while the feeling of insecurity, fear of holiness and divorce and fear of future pregnancy will be unfeasible. Problems and economic concerns are also due to the disturbance of thought and anxiety, and may cause fears its latent lies. Pregnant women are full of turbulence, and as frequent as possible in order to relieve their thoughts and anxieties, the presence of drugs in the environment and the traditional background of the use of substances for relaxation and intellectual comfort, to add to the addiction  
... Conclusion: Drug and stimulant use during pregnancy can lead to irr
