خلاصه مقاله:

The purpose of this study was to examine the distribution of textual metadiscourse markers in the abstract section of national and international English conferences in applied linguistics. To this end, a corpus of 30000 words were randomly selected from the abstract section of national and international English conferences presented in the last decade and was analyzed using Kopple's (1997) model of textual metadiscourse markers. The result revealed that there were statistically significant differences in the use of metadiscourse markers in the abstract of national and international applied linguistics conferences, especially in the use of Logical Connectives, Illocution Markers, Hedges, Certainty Markers and Attributers.

کلمات کلیدی:

metadiscourse markers; text connectives, textual function, applied linguistics, conference proceedings
