خلاصه مقاله:

In recent years, the growing trend of demand and acceptance of naturalists and tourists in fragile and sensitive areas of Iran's desert and desert, and the lack of integrated and comprehensive planning for tourism in these areas, requires special attention on the part of Thinkers, economists and planners on the topic of tourism and hot ecotourism to improve the country's most important economic activities in desert areas. The main purpose of this paper is to investigate an examining of the hot ecotourism development potentials in the Lut desert ecosystem of Iran according to narrative and meta-analysis methods and providing appropriate framework for investigating an examining of the hot ecotourism development potentials in the Lut desert ecosystem of Iran. This methodology of paper was designed with descriptive-analytical and documentary analysis. To this end, after accurately evaluating the various internal information bases for organizing and extracting information and concepts. The results of the study showed that ecotourism is an effective project in the sustainable development of desert communities, and the variables of the development of tourism infrastructure (creating tourist villages in the areas around the Lut deserts near the centers of large populations with ancient works and villages with rich Iranian culture, Providing convenient means of transport), creating desert tours (adventure, scientific and educational), and developing recreational and public programs in the Lut desert (offshore, caravan tours, slopes, skiing and boating, motoring, Accommodation in caravans) can have an impact on the development of hot ecotourism in the Lut desert and attract tourists
