خلاصه مقاله:

Due to the complexity, ambiguity and fluctuation in the current business environment for each economic unit, there are uncertainties and risks to achieve future goals. Considering that there is a wide range of risk factors in conducting projects, one of the important areas of knowledge management is risk management project and there are many scientific studies about the role of risk in project management. The purpose of this article is to review valid articles on the relationship between project management and risk using manual methods and bibliometrics in those articles, and for this purpose 620 articles published in Web of Science during the years 2002 to 2019 were investigated. In this paper, various diagrams such as word dynamics , country scientific production, the contributions of different countries, author s country, the frequency distribution of the sources, the collaborative network, and the country co-map , are being explored . This study shows that America, China, Taiwan and Canadad have been the largest producers in this field.

کلمات کلیدی:

Project Management, Risk, Uncertainty, Performance
