خلاصه مقاله:

Objective: Leptospirosis is one of the most common zoonosis diseases that presents by involvement of different systems. This infectious disease ranges from mild to very severe but bloody diarrhea is not a known clinical primary manifestation of the illness. **Case Presentation:** We describe a patient with leptospirosis who was admitted because of bloody diarrhea in the beginning. The patient admitted as a probable shigellosis case. Diagnosis of leptospirosis was confirmed based on result of *Leptospira* microscopic agglutination test (MAT). After 7 days treatment he made a complete recovery and was discharged. **Conclusion:** Although leptospirosis with presentation of bloody diarrhea is an unusual report. Leptospirosis should be considered in all febrile patients particularly in farmers in endemic area.
