خلاصه مقاله:

Background Rhabdomyolysis is considered a rare medical condition in pediatric population. Case Report We report our experience on a one year old girl referred to Shiraz Nemazee Hospital, Southern Iran with rhabdomyolysis due to severe hyponatremia, secondary to gastroenteritis. Discussion Rhabdomyolysis should be taken in to consideration in hyponatremic states, as it may lead to severe consequences. Treatment of underlying cause and proper management of hyponatremia could be helpful while handling this complicated situation
