خلاصه مقاله:

Background and Aim : Considering the importance of high prevalence of pornography among young people, this study was conducted to determine the prevalence and its related factors among the students. Methods : In this cross-sectional study, 200 students of Payame Noor University were selected randomly. In order to describe the data for quantitative variables, the mean, standard deviation and qualitative variables were used as percentage and frequency. Results : Of the 200 people surveyed, 32.1% stated that they were addicted to pornography and used it for pornography through social networks such as telegrams and instagrams. Conclusion : The results of this study indicate that the prevalence of pornographic prevalence among students is increased and over time, the amount of these statistics will be increased

کلمات کلیدی:

Pornography, pornography addiction, pornography outbreak
