## خلاصه مقاله:

Background and Aim : Evaluation of sexual function and performance in addicts treated with methadone and non-methadone and non-addicted people in prison. Methods : To analyze the data, Kolmogorov-Smirnov test was used to test the normal variables and to evaluate the difference between the three dependent variables, multiple variance analysis. Results : The performance and sexual schema of non-addicted people are higher than those who are addicted to non-methadone treatment, and the performance and sexual schemas of addicted people without methadone treatment are higher than those who are addicted to methadone. Also, there was no significant difference between eradication in addicted people with methadone and non-methadone treated subjects. Conclusion : The performance and sexual schema of non-addicted people are higher than those who are addicted to non-methadone treatment, and the performance and sexual schemas of addicted people without methadone treatment are higher than those who are addicted to methadone. Also, there was no significant difference between eradication in addicted people with methadone and non-methadone treated subjects

## کلمات کلیدی:

Sexual function, sexual schema, addict, jail
