خلاصه مقاله:

Background and Aim : Given the vulnerability of our country to human and natural hazards for many years, especially in the area of health, managers have been working to assess the readiness of their management team to respond to hazards, most of the international standards of set preparedness. It examines the three functional, structural and non-structural domains, but it should be kept in mind that evaluations are valuable when analyzed by specialized committees and measures taken to correct deviations from the standards. Planned and operational. On emergency preparedness for disaster response, the World Health Organization (WHO) has provided a tool to measure the preparedness of hospital emergencies. In this study, we have tried to use the prepared checklists of three general hospitals in Yazd city. Methods : This is a descriptive cross-sectional study based on the results of the evaluation by the respected secretaries of the Risk Management and Disaster Reduction Committee of the target hospitals. The data collection tool in this study is the emergency preparedness checklist of hospitals according to the World Health Organization model. Results : The checklist includes 90 questions: Control and Command (7): 87.7 * Communication (9): 82.2 * Safety and Security (11): 88.7 * Triage (10): 70.04 * Wave Capacity (13): 45.2 * Continued Essential Services (8): 32.2 * Human Resources (15): 50.5 * Material and Inventory Management (10): 80.3 * Post-accident recovery (7): 41.4. Conclusion : As noted, the evaluation will be effective when the operational plan for correction and improvement of weaknesses is written and operationalized by the hospital's specialized committees, fortunately it can be stated that the studied emergencies with respect to accreditation and emergency promotion guidelines. With a score of 64.28, the average score for disaster response is based on WHO standards, and more work is needed to increase preparedness in the areas of continuing service delivery, post-incident recovery and human resources. To be
